

Introduction to Legal and Ethical Issues in IT Security

Modes of Learning

For this course, the following modes of learning will be used:

- Interactive Module
- Online Discussions
- Textbook Readings
- Online Quizzes
- Media

Introduction

Increasingly, cybersecurity is becoming a top-of-mind issue for IT professionals and business executives. The importance of cybersecurity from both governance and technological security standpoints cannot be overstated, given the accelerated pace of digitization of business assets, the heavy reliance on technology infrastructure and the ever-increasing volume of data held by organizations.

This course provides students with a basic overview of legal, regulatory and governance considerations for implementing the highest level of cybersecurity within an organization, considering the organization's industry, the type of information it collects and holds, and its stakeholders' expectations. This course also provides an overview of how to respond effectively when an organization experiences a cybersecurity incident.

Not surprisingly, cybersecurity has been identified as a key focus area by business executives, governments and international agencies. Professionals that have a handle on key risk mitigation strategies will be well prepared to lead their organizations through the challenges of a cybersecurity incident.

As you begin this course, please refer to the timeline and make note of any assessments or important dates. If you have any questions, ask your instructor.

Learning Outcomes

Upon completion of this module, you will be able to:

1. Describe basic concepts and concerns common to cybersecurity and different mechanisms and protection used in cybersecurity.
2. Analyze and describe issues surrounding privacy, privacy law, threats to privacy and general principles for privacy protection.

3. Evaluate the current state of cybersecurity and how security, privacy and compliance fit into the Canadian, American and European legal systems.
4. Evaluate business challenges that financial institutions face.
5. Describe security and privacy of information as they pertain to health records, corporate cybersecurity and privacy regulation.
6. Describe the federal cybersecurity and privacy regulations and provincial laws protecting citizen information and breach notification laws.
7. Examine introductory concepts of Intellectual Property Law.
8. Analyze the roles of contracts, general principles, regulation of behaviour and contract issues.
9. Describe criminal law and tort law issues in cyberspace and cybersecurity governance.
10. Describe risk analysis, incident response and contingency planning.

You have completed: Introduction to Legal and Ethical Issues in IT Security

Remember to check the timeline before you proceed to the next module to ensure you have completed any assignments as required. Check with your instructor if you have any questions.
